5 Easy Ways to Enhance Your Business Communications. Cloudli's Business Cloud Phone sets you free.
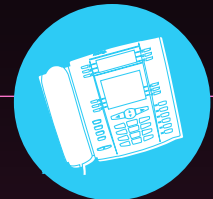

Ditch the copper wire

Carriers are currently changing the copper network for fiber. Avoid any potential disruption for your business by switching to a cloud-based solution now, and take advantage of flexible tools and advanced IP-based features that help your business grow.

Gain flexibility

Analog phone systems don't accommodate the many ways that people work today: your team is tied down by the copper wire that connects your system to dial tone. Cloud business phone delivers the "always-on" connectivity your employees and customers demand, from your smartphone, laptop or desktop — virtually anywhere with an internet or data connection.

Expand how you communicate

With Cloud Business Phone, a rich feature set is available at your fingertips. Beyond voice connectivity, your business can use advanced features like shared team phone numbers, audio conferencing, voicemail transcription and more to enhance how you communicate.

Free yourself from expensive bills

The bottom line is vital for every business, large or small. Cloudli's simple all-inclusive billing means that you'll never be surprised by confusing invoices, additional charges or costly add-on features.

Future-proof your business

Once upon a time, adding new users or the latest features to your phone system meant time-consuming – and costly – upgrades. Cloudli's Cloud Phone system makes it easy to scale: whether you're adding new lines, new extensions or new features, you won't have to upgrade your system again.

**Don't let your phone system bring you down!
Make the move to the Cloud with Cloudli.**
